

SLOPE TOPS WITH AN EDGE

Newly designed locker slope top hoods with pre-cut corner angles and aluminum channels provide a clean, finished appearance. Available for phenolic and solid plastic lockers.

ASI is constantly innovating to provide easy and cost effective solutions to every day locker installation challenges to ensure your facility looks and functions its best.

Pre-cut Corner Angles

Save time on installation, labor, and headaches by eliminating the most difficult part of the outdated slope hood installation - the corners!

Angled Back Edge

Creates a clean installation flush with the wall, eliminating the unsightly "V" groove left behind with traditional slope hood installations. Back-to-back installations come to a clean, distinct point above the lockers.

Forward Facing Black Aluminum Channel

Provides a flush, consistent, clean look to the locker face while also providing added safety by covering the exposed forward facing edge.
